

Object

```
classDiagram
    class Object
    class Collection {
        +do()
        +anySatisfy()
        +allSatisfy()
        +collect()
        +reject()
    }
    Collection --|> Object
```

The diagram shows a class hierarchy where 'Collection' inherits from 'Object'. 'Object' is the superclass and 'Collection' is the subclass. The 'Collection' class has five public methods: '+do()', '+anySatisfy()', '+allSatisfy()', '+collect()', and '+reject()'.
